Here is an example of a haskell code block:

```
test :: Int -> String -> String
test 0 _ = []
test n s = s ++ test n s
```

```
> test 5 "abc"
```

I want this to be a code block that runs:

```
test :: Int -> String -> String
test 0 _ = []
test n s = s ++ test n s
```

```
> test 5 "abc"
```
